PROFILE

I am a software engineer with a passion for creating a better digital experience through the intersection of functionality and design. I have a diverse background that includes working as a developer in the healthcare industry, working for an established web design firm, and assisting a startup in the launch phase. I pride myself on being a great communicator and an enthusiastic learner.

EDUCATION

Bachelor of Science Software Engineering

Iowa State University
2017-2021

CERTIFICATIONS

Google UI/UX Design Certificate

SKILLS

TECHNICAL

.NET/C#	Drupal	Azure	SQL
HTML/CSS	PHP	Claude code	Git
Java	Figma	MVC	WCAG
JavaScript	Vue.js	Shopify	Jira

PROFESSIONAL

Time management	Creativity	Leadership
Problem solving	Design	Active Listening
Communication	Adaptability	Resourcefulness

EXPERIENCE

SOFTWARE ENGINEER

IdRamp | 2025-Present

- Key contributor in the development of the new PwC Webcast Portal
- Migrated old code from Angular to Vue.js
- Used .NET, Vue.js, and SQL to develop new features such as event templates, featured events, event reports and analytics, category filtering, and more
- Used Figma to design several web pages including the Webcast Portal home page, event details page and templates, and event speakers
- Led meetings with client to discuss upcoming features, bug fixes, and deployment schedules
- Leveraged AI tools such as Claude Code to plan upcoming features and improve efficiency

APPLICATION DEVELOPER

University of Iowa Health Care | 2022-2024

- Created a process using Drupal modules and PHP to take information from a webform and turn it into a printable PDF greeting card to be delivered to patients
- Led development on an appointment request web handler that used EPIC API to create more detailed requests, enabling a faster workflow for patient schedulers
- Created a filterable jobs listing Drupal module for the site using an Algolia search feed, allowing users to see focused job listings without having to navigate to another site
- Was an active member of the JIRA technology committee, managing user permissions, adding filters, creating workflows and fields for issues, and presenting JIRA tips to the department

SOFTWARE ENGINEER

Cylosoft | 2020-2022

- Used .NET, C#, and SQL to take design mockups and build out web pages and features such as image sliders, product pages, and user checkout pages
 - Worked with a custom CMS to add content, images, products, and styling to e-commerce sites
 - Implemented a service worker to allow users offline access to web applications, allowing them to update their work status without an internet connection
 - Led the effort to ensure all websites met WCAG accessibility standards by using Siteimprove to locate issues and updated the code with more accessible solutions
-

STRENGTHS

COMMUNICATION

My soft skills are where I separate myself from other candidates. I am a comfortable public speaker, an active listener, open-minded, willing to give and receive feedback, and confident in my abilities to give technical instruction and provide helpful documentation. I love to share ideas with others and thrive working in a team environment.

DESIGN

I am enthusiastic about design, and jump at any chance to apply it to my work. I have completed a Google certificate in UI/UX Design, including mockups for a punk band merchandise website and an app for plant care. I have designed websites for myself and others in Wix, Shopify, and Vue.js, including my own portfolio site.

RESOURCEFULNESS

An overlooked part of development is being resourceful. Naturally during development you will find yourself stuck on a problem. I am adept at using all the tools available to me to get myself unstuck, whether that be internet tutorials, discussion boards, or reaching out to colleagues who have encountered similar issues. I am also comfortable using these same tools to teach myself new skills.
